

Install Application on Server using "Server Installation" into a folder (do not use Program Files folder) that will be shared. Set proper rights (Read/Write/Execute) for each user or group. Run the application and enter registration information. Details are below:

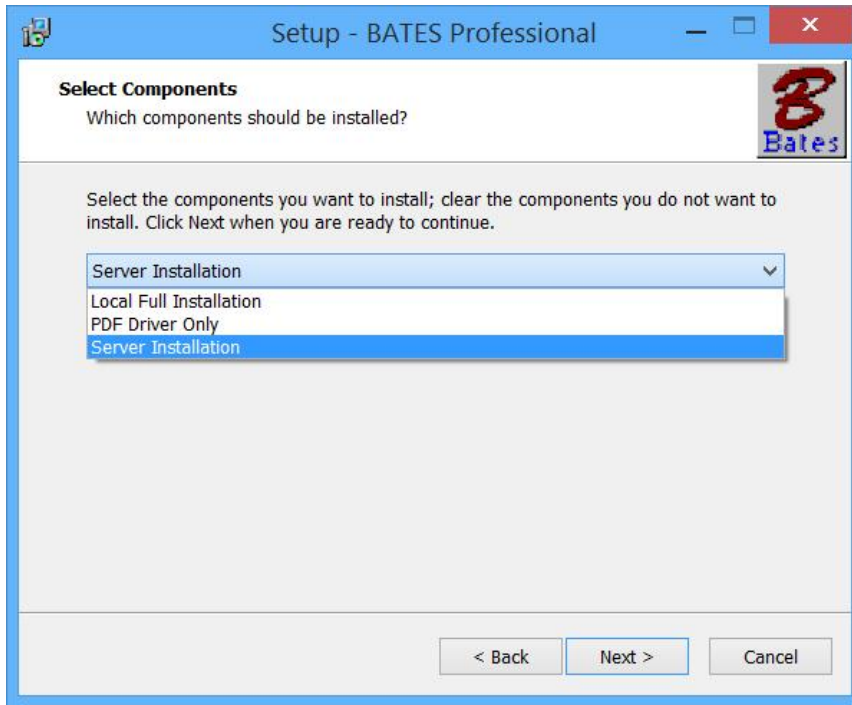

Please read and accept our license agreement. Press Next:

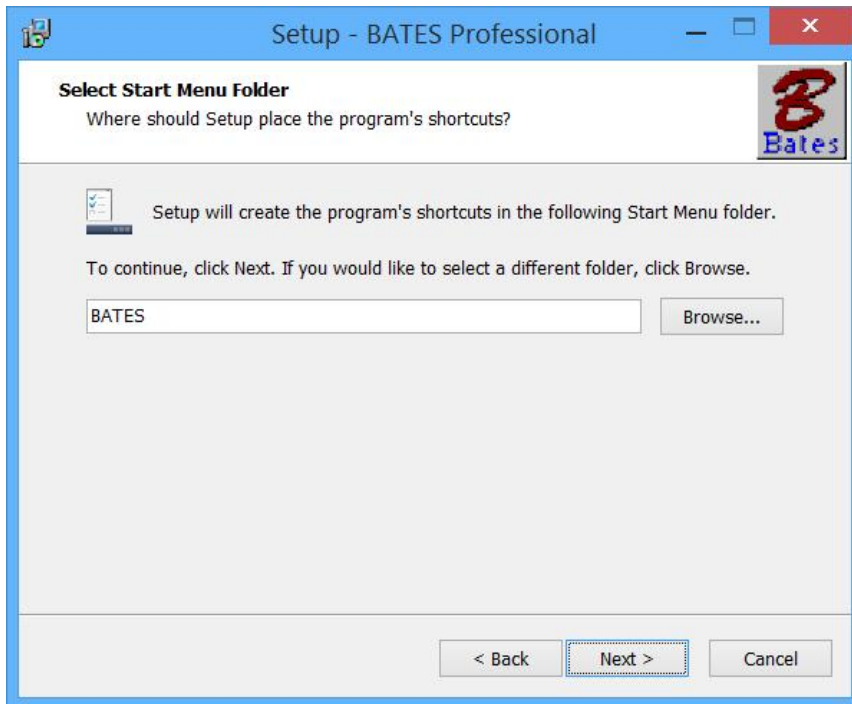

Select the folder to install the application. Do not use the Program Files folder as you will not be allowed to set the read/write/execute permissions in that folder. Press Next:

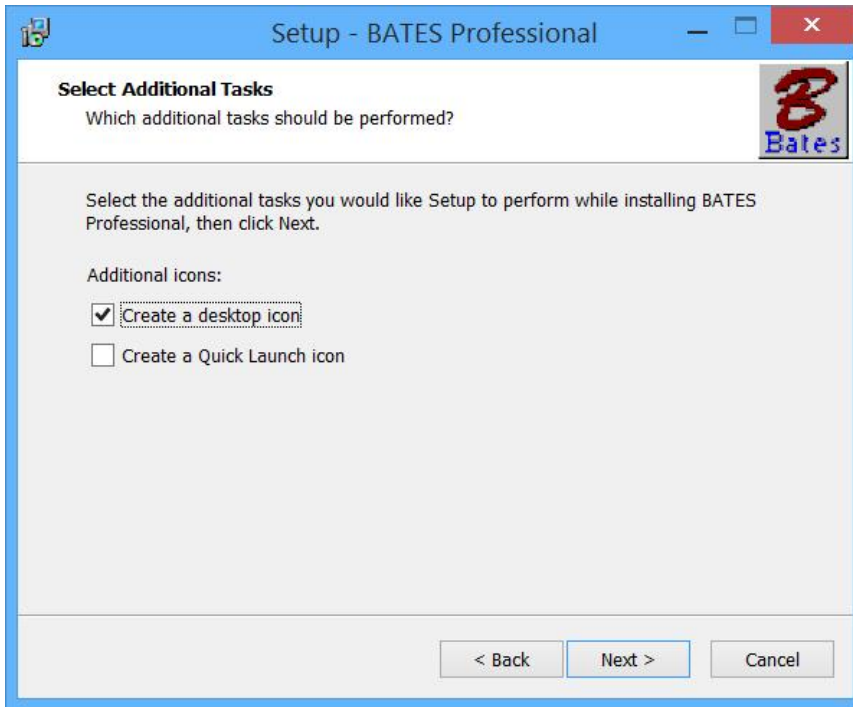

Select Server Installation from the drop down menu. Press Next:

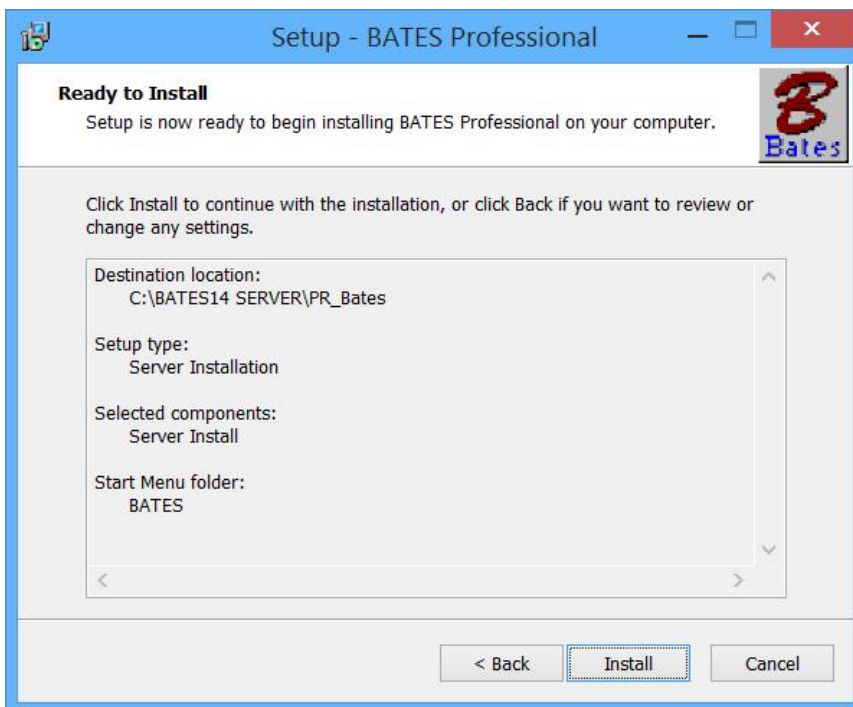

Select as desired. Default will work fine.

Make choices for shortcut and/or taskbar Quick Launch icon. Press Next:

Review your install settings. You may go back and change if needed. Press Install:

[Workstation] - Install "PDF Driver Only" and click "Fix Network Help" in Utility on Main Page.

Create a shortcut to the application that resides on the server. (see "Shortcuts" in Help)

There should also be a BATES.INI in the Server folder. Make sure Options is set to 1.
